

PREVENTT

Preoperative intravenous iron to treat
anaemia in major surgery

The
PREVENTT
Newsletter

Issue no.52
September 2018

LAST CHANCE

ONLY 20 PATIENTS REMAINING

Final Call

Dear colleagues,

We thank you for what has been a monumental month of recruitment last month. There were 15 patients recruited to the study!

Your final chance to randomise patients into PREVENTT falls on the 30th September 2018. A maximum of only **20 more patients** can be enrolled into the trial. After we reach either 500 patients or the 30th September the randomisation website will be closed.

Patients can be randomised 10-42 days before their planned date of surgery. This means that you can be looking at patients who have planned surgery dates up to November 11th. These patients will need to be brought in to be randomised and given the infusion this month to ensure that they can be included in the study. Please be sure to make full use of our taxi account to pick up and drop patients off at home and to make taking part as smooth as possible. Contact Kim (kimberley.potter@lshtm.ac.uk) for more details about this.

Recruitment bonanza!
